

Using Clinical Data to Meet Reporting Requirements

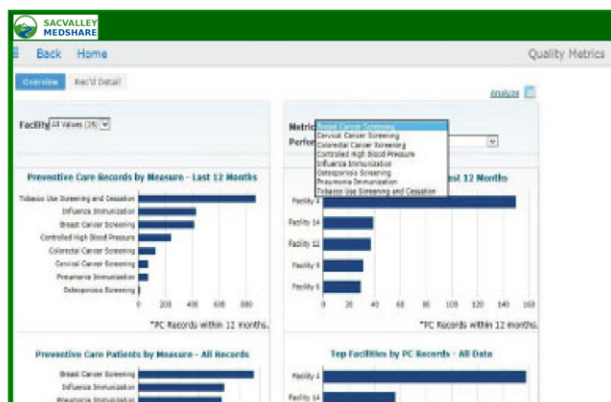

The escalating importance and availability of health care analytics deliver physicians a means to successfully transition to the new Quality Payment Program (QPP) models. Physicians are expected to manage diverse data sets, to face increased competition, to answer growing regulatory complexity, and to deliver value-based care to their patients.

How can physicians harness this opportunity? Robust data and analytics. Meaningful analytics hold the power to transform patient care, reveal new sources of value and differentiate competitors.

SacValley MedShare analytics dashboards can ease the transition to QPP reporting by providing physicians access to patients' aggregated data from the HIE presented through meaningful analysis.

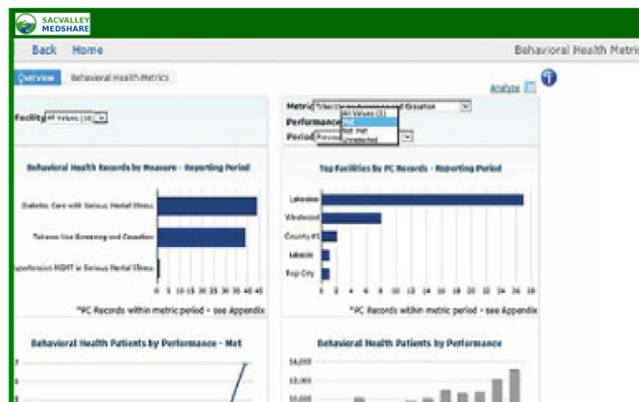

Dashboard Available Include:

- Quality Metrics
- High Risk Patients
- Readmissions
- Disease Registries
- Utilization
- Behavioral Health
- Controlled Substances
- Polychronic Patients

Quality Metrics

Quality Metrics dashboard displays analysis of preventative care procedures commonly required and approved for quality reporting programs for clinic practice and hospitals. Individual measures are structured to meet NCQA, CMS and HEDIS requirements. Current reported measures include screening for colorectal, cervical and breast cancers, osteoporosis, and pneumonia and influenza vaccines.

Behavioral Health

Behavioral Health presents an overview of specific metrics that address early detection, treatment and management of patients with behavioral health and medical conditions, including depression, suicide risk, diabetes, high blood pressure and other related health conditions. Compliance for each measure is also available.
