

Public Health Provider

SacValley MedShare offers a valuable platform for sharing crucial health information among different healthcare entities, especially for public health facilities.

By becoming a member of SacValley MedShare, you can significantly improve patient care by using the exchange for:

- Sharing your patients' labs, radiology reports, and admission/discharge/transfer (ADT) data.
- Viewing the exchange data for your patients shared by other facilities and emergency rooms visited by your patients.
- Eliminating the need for faxing, electronic mailing, or couriering information.
- Improve public health reporting between agencies, providers, and hospitals

Healthcare providers can gain HIPAA compliance assurance by restricting access to only those who need patient data, ensuring the confidentiality and safety of shared information.

As a not-for-profit organization, SacValley MedShare relies on contributions from member organizations, highlighting its community-driven nature. Joining SVMS seems like a proactive step for healthcare organizations looking to enhance collaboration and ultimately improve patient care.
